

Der Englisch Grundkurs der Q2 bei Frau Rhein beschäftigte sich im Unterricht mit dem Thema Plastikmüll in den Meeren. Dazu haben die Schülerinnen und Schüler in drei Gruppen unterschiedliche Plakate (digital bzw. analog) erstellt, die ab jetzt in unserem Schulgebäude aushängen.

NOT MY PROBLEM?!

at least **600** different species are threatened by plastic waste (especially fish & other marine animals)

affects the livelihoods of the people
affects social well-being,
food production capacities
+ quality of the food supplies

700.000 units of microplastic fibers are released per washing cycle

What you should do:

- escape consumerism
- engage in plastic recycling
- reconsider your own alternatives
 - > instead of buying plastic bottles, use glass bottles
 - > grow your own vegetables (if able to)

bzw. analog) erstellt, die ab jetzt in unserem Schulgebäude aushängen.

Do something drastic, cut the plastic!

Plastic is part of our everyday lives. Although everybody uses it, nobody thinks about the rising problem of plastic waste polluting the ocean.

You can change it!

- buy less plastic
- recycle your waste
- separate waste correctly

100 MILLION MARINE ANIMALS DIE EACH YEAR FROM PLASTIC WASTE

It is estimated that marine plastics are contributing to the death of more than 100,000 marine mammals every year. Plastic can affect marine species in a variety of ways, from entanglement and injury to ingestion and toxic contamination. The major determining factor is the size of the plastic, which can adversely affect different species in different ways.

Plastic Items Dominate Ocean Garbage

The 10 most widespread waste items polluting the world's oceans!

Plastic bag	11.3%
Plastic bottle	11.3%
Food container	4.4%
Cutlery	4.4%
Wrepper	3.7%
Synthetic rope	3.7%
Flotation device	3.7%
Plastic cap/bottle	3.7%
Industrial packaging	2.0%
Glass bottle	2.0%
Drinks can	2.0%

Plastics are estimated to take up to hundreds of years to fully decompose, some of them break down much quicker into tiny particles, which end up in the seafood we eat.

Auf den Plakaten kann man sehen, wie sich unsere Umwelt durch die Plastik-Verschmutzung verändert, welche Auswirkungen dies auf uns und unsere Tierwelt hat und was wir alle dagegen tun können. Verschließt also nicht eure Augen, denn das Problem betrifft UNS ALLE!
